

# DevOps Certification Training

## Selenium Assignment

You have been hired as a Test Automation Engineer by a Software company ALT corporation. You have been assigned a task to automate their application testing using Selenium.

You are requested to execute following task.

1. Create an AWS EC2 Instance.
2. Deploy and run address book application.
3. Check the version of the browser and download appropriate chrome driver.
4. Write a Test automation application to automate the Facebook.com Login flow using Selenium.
5. Export your test automation application as runnable jar.
6. Push that runnable jar to GitHub repository.
7. Run the automation application.
